Midterm Activity #3 - Simple Wallet System

Source Code:

```
package one;

import java.util.Scanner;

public class SimpleWalletCristobal{
    public static void main(String[] args){
        Scanner input = new Scanner(System.in);

        double balance = 3000.0; // initial balance
        int transactionCount = 0;
        boolean running = true;

        while (running){
            System.out.println("\n===== WALLET MENU =====");
            System.out.println("1. View Balance");
            System.out.println("2. Add Money");
            System.out.println("3. Spend Money");
            System.out.println("4. Exit");
            System.out.print("Choice: ");
            int choice = input.nextInt();

            switch(choice){
                case 1:
                    System.out.println("Current Balance: " + balance);
                    transactionCount++;
                    break;

                case 2:
                    System.out.print("Enter amount to add: ");
                    double addAmount = input.nextDouble();
                    balance += addAmount;
                    System.out.println("New Balance: " + balance);
                    transactionCount++;
```

```
                break;

            case 3:
                System.out.print("Enter amount to spend: ");
                double spendAmount = input.nextDouble();

                if (spendAmount > 1000) { // max 1000 per transaction
                    System.out.println("Transaction Failed: Exceeds maximum spend of 1,000.");
                } else if (spendAmount > balance) { // cannot exceed balance
                    System.out.println("Transaction Failed: Insufficient balance.");
                } else {
                    balance -= spendAmount;
                    System.out.println("Success! New Balance: " + balance);
                    transactionCount++;
                }
                break;

            case 4:
                running = false; // exit the loop
                System.out.println("Total Successful Transactions: " + transactionCount);
                System.out.println("Exiting program...");
                break;

            default:
                System.out.println("Invalid choice. Please try again.");
        }
    }
    input.close();
  }
}
```
