Student Age Analyzer

```
import java.util.Scanner;

public class StudentAgeAnalyzerCristobal {
    public static void showAgeCategory(int age) {
        if (age >= 0 && age <= 12) {
            System.out.println("Category: Child");
        } else if (age <= 19) {
            System.out.println("Category: Teenager");
        } else if (age <= 59) {
            System.out.println("Category: Adult");
        } else if (age >= 60) {
            System.out.println("Category: Senior Citizen");
        } else {
            System.out.println("Invalid Age");
        }
    }

    public static void main(String[] args) {
        Scanner input = new Scanner(System.in);

        System.out.println("Student Name: ");
        String studentName = input.nextLine();

        System.out.print("Student Age: ");
        int studentAge = input.nextInt();

        System.out.println("\n===== Student Details =====");
        System.out.println("Name: " + studentName);
        System.out.println("Age: " + studentAge);

        showAgeCategory(studentAge);

        input.close();
    }
}
```
